

Dr Hook Towing Building Addition

To meet the demands of their growing business, Ernst Hansch Construction was selected by Dr. Hook Towing Services to design and build an addition to their existing facility at 75 Lowson Crescent. Through the design process, Ernst Hansch Construction Ltd. worked closely with the client to explore their vision and

identify the project requirements. The building addition was constructed using precast concrete wall panels, supporting the roof structure and eliminating the need for steel columns, beams and supports. The new 7,600 square foot, precast structure houses administration offices, three service bays and a 100 foot long wash bay.

Client	Dr. Hook Towing Services
Location	75 Lowson Crescent Winnipeg, Manitoba
Size	7,600 square feet
Completed	August 2004
Project Type	Industrial
Services	Design-Build
