

## New Waste Water Treatment Plant

Ernst Hansch Construction Ltd. (Hansch) was awarded the Golder Associates Inc. contract to build the base building for the water and waste treatment plant at Canadian Pacific Railway Company's Weston Shops yard in Winnipeg, Manitoba.

Construction included the foundation works, supply and erection of the building, masonry work and plumbing rough ins. High water levels in the ground posed a challenge throughout the underground and foundation work. Hansch maintained a dewatering system to overcome this challenge and completed this project on time.
